

## Minimum Room Sizes

The table below should only be used as a guide and any unique features of the room (e.g. room shape, tables and cupboards, doors, etc.) should always be taken into consideration. Additional thought should be given to the position of the trainer, how people will enter/leave the room and how practical assessments will be undertaken. The size of the room is highly likely to determine the maximum class size and this must be ascertained prior to organising the course. **A space in excess of 56m<sup>2</sup> will be required for a class of 12.**

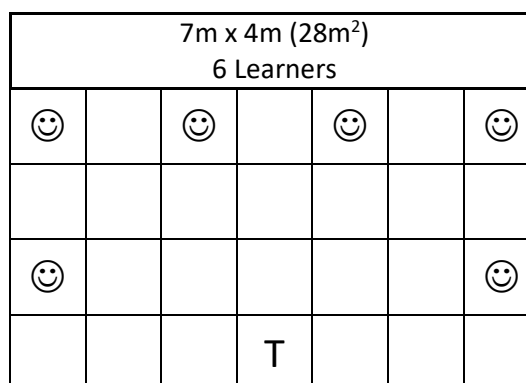

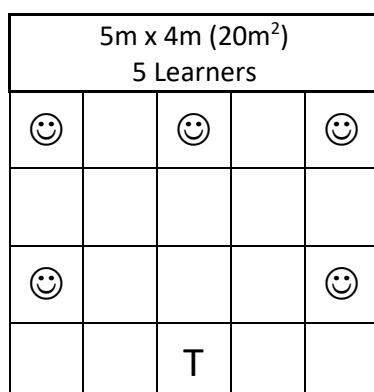

Learners	Minimum Room Size (m <sup>2</sup> )
1	>12
2	>16
3	>20
4	>24
5	>28
6	>32
7	>36
8	>40
9	>44
10	>48
11	>52
12	>56

**For the safety of the learners and the course tutor, if a large enough space isn't available on the day, we may need to limit learner numbers.** The venue should comply with all necessary Health and Safety standards and should be set up in the agreed format prior to the trainer's arrival.

## Examples of Room Spacing

The examples below illustrate the **minimum** space required to socially distance learners by 2 metres in various room sizes. In practice delivering training of a practical nature using the 'minimum' spacing will be very difficult. We therefore recommend that larger spaces are used wherever possible.

### Wide Rooms:
